Medior/Senior Java Developer

The future is automated and digital. Companies want to see their results real-time with the help of dashboards and reporting templates. But setting this up is a job in itself. That is why at Mediabrands bGenius we are looking for a software developer in Amsterdam. Do you have experience with Java and affinity with front-end development? And do you want to develop within an international company? Then read on.

Introduction

bGenius is an online marketing management system and offers the online marketer the opportunity to optimize campaigns in different advertising networks and manage them in one system. The system provides suggestions based on data from Advertising media, customer CRM systems and Web Analytics, among others.

bGenius is part of IPG Mediabrands, an international organization that includes various labels. That is why you regularly work with fellow developers in Groningen, Paris, San Francisco and Chicago. Our office is located in Amsterdam, within walking distance of the station and a good coffee place.

About the function

We are looking for a software developer who can support us with product development and internal processes. From setting up reporting templates to building APIs and dashboards.

Experiences of colleagues:

Yashar Robert, developer
"At bGenius we work on very diverse projects from machine learning to large applications. That way I get the chance to use many different languages and technologies and to learn new things. "

Cristina Ilie, junior developer
"Working here it's the perfect balance between enjoying challenges as a developer and fun time with honest and hardworking people."
